

## Case Study

*How a pharma company achieved multiple benefits by automating its invoice process*

## Automated invoice scanning for a pharma major

### Business Situation

The customer, a UK-based pharma major, wanted to automate invoice scanning process to address the volume of superior invoices and quantum of work to reduce time and effort. The challenge was to come up with a flexible solution so that each clerk could handle their own invoices.

### Mahindra Satyam Solution

Mahindra Satyam came up with a solution that had extensive capabilities to handle whole invoice workflow inside SAP R3. The scope of the solution offered also included archiving invoice images that are scanned and to be viewed as attachments from SAP business objects. Other highlights of the solution include: automatically classifying and sorting invoices, validating captured data against business system, and integrating approval mails with Lotus Notes.

### Benefits

- Centralized the entire invoice process
- Decreased manual work substantially through automation of approval process
- Reduced total invoice processing time
- Improved supplier handling
- Reduced scope for transcription errors
